

3x24 XB ACOG® – CROSSBOW RETICLE

The Trijicon ACOG® Crossbow Scope reticle is designed to be zeroed at 30 yards with corresponding stadia drop bars out to 80 yards in 5 yard increments with the top of the vertical post being the drop for 35 yards. The wide stadia lines represent 18" wide (ear tip to ear tip of a whitetail, or chest width of an elk) at that range. The narrow stadia lines represent 2" wide (diameter of white circle around the eye of a whitetail deer) at that range.

The Trijicon ACOG® Crossbow Scope reticle utilizes the Bad River Outdoors® Ranging System to be able to range a whitetail deer and mule deer on the right side, or elk on the left side while looking through the optic. Place the horizon line on the rib cage or belly of the animal and the corresponding upper range mark that lines up with the animal's back will indicate the range of the animal. All upper range marks represent 6" wide at that range. All line thicknesses represent $\frac{3}{4}$ " thick at that range.

TA50-C-400143 (XB1)	300 – 340 fps
TA50-C-400144 (XB2)	340 – 400 fps
TA50-C-400145 (XB3)	400 – 445+ fps

Note: If your bolt speed borders between two models, choose the model with the lower speed.
